Object: A great first Tokenization of Octopus Robots SA patents

Covir & OctopusRobots are proud to announce the origination of their CVR FA1.2 token onto the Tezos Mainnet. The contract is referenced under

KT1T1tZRqU7DuLf6qsMFxBFFXqLsAG3qhXxY.

The token contract was developed using SmartPy and the code is available onto our github (github.com/covir-io). You can also read the full specifications onto our github page ([readme.md](#)). The contract was beforehand extensively tested onto babylonnet and carthagenet.

The contract is based on FA1.2 model, but has been modified to bring additional features required by our project such as sale entry points, funds split, contract ownership and administration management...

CVR tokens represents the license rights attached to Octopus Robots Biosafety solution against COVID-19, that will generate incomes over license sales and royalties.

NOTE that you can get more information on our amazing project directly from our website [Covir.io](https://covir.io) and read our white-paper.
