Octopus Robots, a company listed on the stock exchange Euronext Paris and Stuttgart BOSE, filed a patent on February 7, 2017 PCT / FR2017 / 050277 (valid for 20 years i.e. 2037) and is developing a technology for air disinfection (spray) of spaces and surfaces potentially contaminated by viruses, e.g. Covid-19, or bacteria.

The market (airports, supermarkets, factories, ...) was not receptive to these disinfection issues in 2017, 2018 and 2019. Healthcare sector (mainly hospitals), a potential client, having no budget, the technology has been developed and applied to animal husbandry where it has been proved that it improved the quality of the production with a better profitability.

The COVID-19 pandemic, and the direct and indirect economic consequences, put the general public disinfection applications and means in front of the scene and generates a huge global disinfection means and a big interest in Octopus Robots Med Tech Start up, listed on Euronext.

In order to address these interests and allow the financing of the worldwide industrialization of his automated and autonomous spray/nebulization disinfection robots, the company provides operations and/or factoring licenses (by client or by geographical zone) to speed up the availability of his solutions.

The global containment measures do not allow to classically negotiate "face to face" with Asian, Russian, US customers etc... and the financing being very urgent and important to industrialize quickly it was decided to use digital methods to strengthen the effectiveness of financing implementations and finding resources and solutions outside of conventional financial systems (banks, funds, etc.), which are timid, inefficient and unsuitable in emergency states.

In partnership with COVIR.IO, operational pre-financing vehicle, Octopus Robots launches the pre-financing of its global portfolio of potential licenses by TOKENIZING ITS LICENSING RIGHTS ON THE TEZOS BLOCKCHAIN.

The digitalization of License's rights, intangible assets, thanks to the tokenization, will allow a better liquidity, pooling and opening to all the countries or geographical area. The blockchain technology helps to gain efficiency, thanks to COVIR.IO smart contract automating the sale of the token and the distribution of the royalties.
